

All through my formative years I was very intrigued by science and technology. The amazement towards the subject led me to Engineering. In the past four years of engineering, I had performed exceptionally well academically. In addition, I was an active participant on my university's campus. I was Public Relations Head of the Indian Society of Non-Destructive Testing- Student Chapter for nearly 2 years. Working with other students has strengthened my belief in peer learning.

During my under-graduation in Mechanical Engineering, I interned at Schutz Carbon Electrodes Pvt. Ltd, and Illinois Tool Works, to gain first-hand experience and grasp quality industry expertise. Currently, I am working as Graduate Engineer Trainee at Oilvacal Corporation. The approximately eight months I spent at the company, enabled me to communicate with industry experts and members of the senior management which made me aware of the avenues present in the field of operations. I also experienced how efficiently a team with the know-how of the technical department, the decision-making and business acumen of a manager can perform. The experiences and interests I have developed through the internships and Work Experience make MBA an obvious choice for my career. So, with my career goals, MBA will groom me to be a business leader who has both technical knowledge and also a sound understanding of business goals.

I completed a five-course specialization in Supply Chain Management -my primary area of interest and obtained other certification courses in Project Management, and Effective Problem Solving and Decision Making.

I want to be associated with an institution that has the knowledge resources and reflects the true character and NMIMS Mumbai is exactly that. The networking opportunities, the pedigree and history of the college, the strong alumni network, a wonderful mix of peers from across the country, and comprehensive guidance from the esteemed faculty at NMIMS Mumbai, will steer me in that direction, seamlessly.
